

Monitor and Analyze your Logs

Elastic Monitoring

- Flexible and scalable log management
- Tailor-made dashboards, reports, thresholds and alerts
- Search, save and analyze data in history

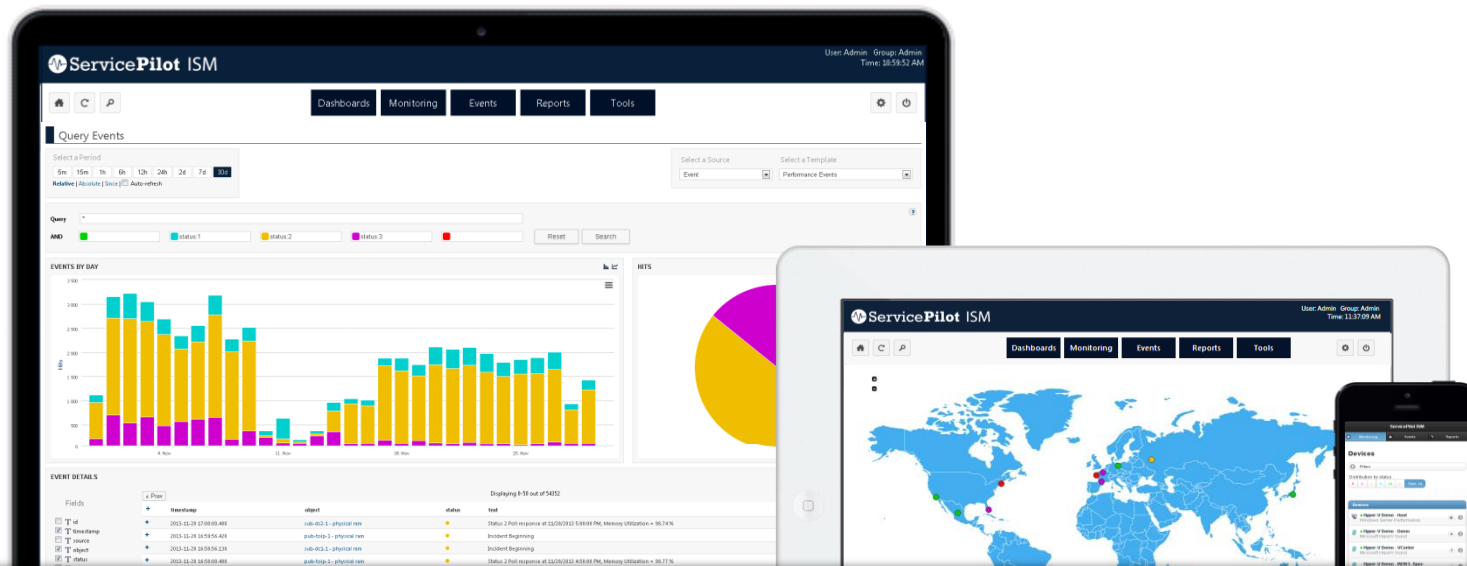

Cross domain & vendor Analysis

- Any domain
VoIP, network, servers, mainframes, applications, and more
- Any vendor
IBM, Cisco, HP, F5, Linux, Microsoft, MySQL, Ruby, and more

Easy log Management

- Intuitive GUI
- Mobile and tablet ready
- Built-in big data analytics query engine
- Multi-tenant

Elastic Monitoring
Cross domain & vendor
Easy-to-use

Monitor and Analyze your Logs

Index ANY type of data

- Any text-based logs
- Any source
- Any location
- Any domain
- Any vendor
- Any 3rd party software

Built-in big data analytics query engine

- NoSQL “google-like” search engine
- Queries can be turned into a powerful real-time monitoring and alerting tool.
- Threshold conditions definition and automatic actions triggering

Reporting and in-depth analysis

- Historical Charts, Capacity Planning, Ranking Tables, Trend Analysis, SLA
- On Demand and scheduled PDF Reports

Large data volumes

- Index massive data volumes

Add knowledge & enrich context

- Automatic extraction of indexed IT data and rich context thanks to other knowledge assets

Complex event correlation

- Dependencies mapping between your services and the underlying IT infrastructure
- Data correlation from multiple sources for root cause analysis

VoIP log management samples

- Unauthorized calls
- Unusual calls destinations
- After hours calls
- VoIP spam
- Excessive duration calls

Network log management samples

- Login success/failed
- IOS reload/restart
- Firewall Denial of Service
- Unauthorized traffic

Personalized dashboards

- Geographical, Technical and Business Maps
- Varied displays such as charts, pies, tables, counters and more
- Customizable gadgets
- Built for multi-tenancy

Monitoring and alerting

- Direct feed from ISM monitoring agents
- Easy integration with other monitoring tools
- Proactive alerts console with fault & performance issues
- Notifications: SNMP Traps, E-mail

Server & Application log management samples

- Server login
- Timesync Failure
- Restart/Reload/Reboot
- User/Group Add/Delete
- Removable media insert
- Applications authentication

z/OS log management samples

- RACF Violation
- FTP data, use and events
- JES2 events
